Denfeld Nation Automation (DNA) Update for Week Four

Greetings,

As we enter DNA's fourth week of the build season, the team has been very busy with getting our robot into its final stages. All of our sub-teams are working especially hard to bring our robot to life. The build team has welded the frame together and finished assembling the intake for our robot. The programming team has been working closely with the build team in order to perfect the climber. The field build team has completed the field and is also helping the build team with the robot. Electrical has been hard at work on the robot, having finished up the electrical board and they are now wiring up all the motors. During this time the CAD team has been refining the robot and finishing up with the intake system and the shooter. The business team has been continuing work on chairmens as well as contacting businesses for fundraising.

Stay tuned for the following weekly updates. Please let us know if you prefer to be removed from these emails or if there are other people in your organization that we should include to receive these updates.
