Denfeld Nation Automation (DNA) Update for Week Seven

Greetings,

During the seventh week of our build season, we were able to put the finishing touches on both the build and business sides of the team. The robot build sub-team reinforced our climbing mechanism with steel as well as our intake system. The programming sub-team worked on autonomous code and worked on testing it throughout the week. The business sub-team interviewed for awards for our first regional competition. They also worked on graphic design for graphics for our robot as well as our pit. The drive team practice driving over the past weekend at Itasca Community College and was able to learn a lot about how our robot operated on the field and continue to do so this weekend at Esko High School.

Stay tuned for the following weekly updates. Please let us know if you prefer to be removed from these emails or if there are other people in your organization that we should include to receive these updates.
