Denfeld Nation Automation (DNA) Week Four Update

Greetings,

DNA's fourth week of the 2024 build season was full of progress, coming closer to having a working robot. The build subteam finalized their intake and shooter designs, starting to construct the actual mechanisms and getting ready to attend the ARC Field in Hermantown next week. The ARC field is a great opportunity for local teams to practice on a field before a competition.

The programming team this week started to program the final intake and shooter as well as start programming April Tags for shooting and tracking the robot.

The Business team completed an important milestone in the fundraising process, getting close to their budget goal. The graphic design subteam finalized the team's competition logo, getting a unanimous vote of support from the rest of the team on the design, and eagerly waiting for the finished product.

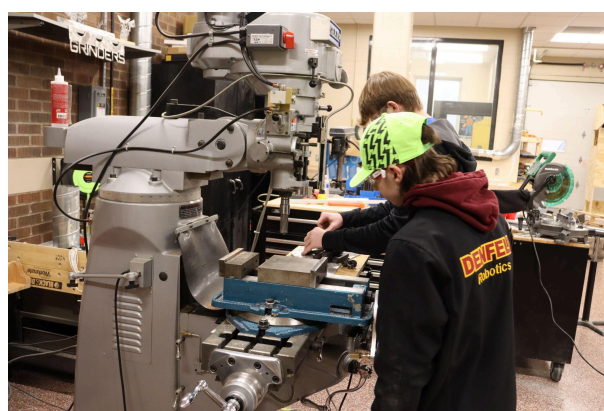

We are very excited to be continuing the 2024 build season! To keep up with our progress, check out our social media sites.
