Denfeld Nation Automation (DNA) Week One Update

Greetings,

DNA had a very productive first week of the 2025 FRC season! The team focused on prototyping and testing, the first hurdle in building their robot for their first competition at the DECC on February 27 through March 1. Here are some insights on each sub-teams progress this week:

DNA's Field Build sub-team built materials for game elements, building the reef element and barge, to help practice with prototypes. They are currently working on building the barge element to practice the end game climb factor of the game. The CAD sub-team made a library of parts for the upcoming robot and set the groundwork required to start building the robot. The Programming team worked on installing new software and updates and getting the team's drive train working. The DNA Business team is continuing to raise money for their 2025 season so the team can attend their second competition in La Crosse Wisconsin on March 19 through the 22. They are grateful to all of the businesses that have already sponsored them for the 2025 competition and look forward to the future ones!

We are very excited to begin the 2025 build season! To keep up with our progress, make sure to check out our social media sites.
