Denfeld Nation Automation (DNA) Week Two Update

Greetings,

It has been an eventful week two for DNA. Everyone was hard at work to ensure success at our upcoming Northern Lights Regional competition on February 27 at the DECC. DNA knows that teamwork is the most important factor when it comes to robotics and have used their skills to help build their robot this week!

The Field Build sub-team worked hard at finishing the construction of the barge and source game element and began to work on the frame of their final robot design!

The CAD sub-team worked diligently to finalize the framework of the robot and complete the design for the build and programming team to make and code the robot as effectively as possible. The Programming sub-team worked on importing the auto library from last year, which are the programs that the robot has to run for the first 15 seconds of the match autonomously and are integral to the game.

Everyone on DNA is working so hard to make sure they have an amazing season, and it is definitely showing! We can't wait to see what great things they achieve this year!

To keep up with our progress, make sure to check out our social media sites! Our first regional will be held at the DECC from February 27 - March 1, 2025.
