

DULUTH, MN – 24, January, 2026 – Build Week 2

DNA has been hard at work during build week number two. They powered through despite some of the challenges that have arisen during the week. The temperature outside has been under negative twenty for the past few days causing some practice cancellations. Nevertheless they have been making do with the practices that they have been lucky enough to have.

The build team has been prototyping many designs for their robot including managing to finalize one of their designs. The programmers have been very busy making the code for driving under and over the various obstacles of the field as well as coding for the turret design that the build team is currently working on. There is also a designated part of the programming team that has just been working on doing the math for the turret so it is accurate while shooting.

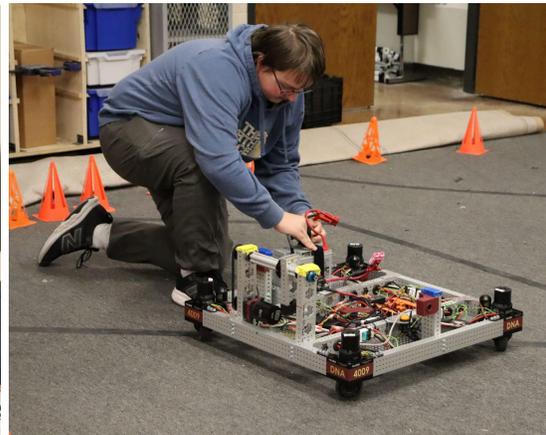

In the meantime, the graphic design team has been working on the team's new pit screen pages as well as designs for the new team shirts and buttons. The business team has been very busy fundraising for the team. The business and media teams have been working together on the team's submission for the Impact Award.
