

## **DULUTH, MN – 31, January, 2026 – Build Week Three**

Greetings,

DNA has had a very productive week three of their build season. They have been working hard on the climber for the robot throughout the week. The build team has also been making some tough choices, deciding which form of intake they will be using for this year's robot. Meanwhile their field build team has worked hard since the start of the season and have finished building their practice field this week.

DNA's programming team have been efficient in their work and are currently ahead of the build team, having coded everything that they can without the finished robot. During this extra time, they have been practicing their driving skills with the practice robot that was assembled previously. Members of their team have also been working on designing different options for robot mechanisms using Computer aided design (CAD).

During this week, their graphic design team has finished this year's t-shirt design and they are very close to being done with their pit screen app design to show off their team during competitions. The media team has been staying consistent with their posting schedule and are still diligently working on their Impact Award submission. Their business team is continuing to work on fundraising to allow the team to get the parts that they need for the robot.
