

DULUTH, MN – 21, February, 2026 – Build Week Six

It's winter break week for Denfeld High School so Denfeld Nation Automation has been spending all available time working on their robot. On Sunday, February 15th, the team went to a scrimmage with other teams in the Arrowhead Robotics Coalition. DNA took their learnings from the scrimmage back to the workshop to ensure they're at their best for the upcoming competition starting March 5th at the DECC in Duluth, Minnesota.

Build has been hard at work improving their robot design. From CAD to electrical, everyone is working together to get the robot competition ready. They have been redesigning the intake and optimizing the functionality of the robot. Electrical has been wiring the subsystems and powering up the batteries. Programming has been coding our subsystems to achieve peak performance. Manufacturing has been working nonstop to build the subsystems that make up their robot.

The business branch has been working hard on impact and outreach. The business captain has been working with his graphic design subteam to create documents and files for competition program judging. The media subteam is editing the team's Impact Award video submission and finalizing the rest of the award materials.

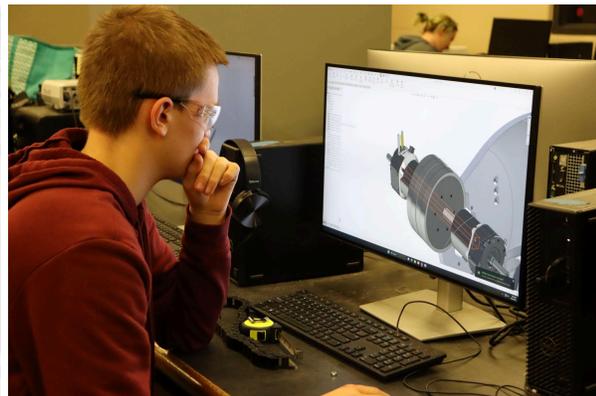

DNA will be at the Lake Superior Regional at the DECC in Duluth MN, from March 4th to the 7th. Competition matches will take place on Friday March 6th and Saturday March 7th, with practice matches on the 5th.
