

DULUTH, MN – 28, February, 2026 - Competition Week Zero

The first week of the competition season has been very exciting for DNA. They have been incredibly focused on finalizing their robot for their first competition in the upcoming week. Their first competition is March 5th through the 7th at the Duluth Entertainment Convention Center (DECC) in Duluth MN. They hope you will come to watch their team and their robot at one of their most important events of the season!

Build has made great strides in their adventure to assemble a spectacular robot. The intake has been attached to the robot and is ready to be programmed. The hopper has been completed and can hold over 20 game pieces in it at once. Programming has been coding away, making the subsystems work together in harmony. Electrical has been wires deep in the frame connecting the power supply throughout the entire robot. The team has made tremendous progress with their robot, marking this week as their busiest and most productive this season so far. By the end of the week, the team had their robot fully assembled and sent to their programming team.

The business subteams have been busy as ever. Graphic design has completed their quest to assemble an outreach binder, which consists of every event they have done in the past few years. Media has been buried in papers working on the Impact binder since finishing their Impact video submission. An Impact binder allows the judges to look through information after their presentation is over. The team is all so excited for their first competition and hope to see you there!
